 FILTER ELEMENT - Preferred filter media - For the complete range of elements available, refer to the U56x series catalog.

### USER TIPS

The filter element must be replaced when:

1. the oil transfer is completed (if used as oil transfer unit).
2. the target cleanliness class is reached (when used as off line filtration unit); more filter elements could be necessary to reach it, depending on the oil volume to be cleaned and from the initial contamination level.
3. the clogging indicator shows.
4. a different filter media is required. We recommend a fine filtration; filter elements for water removal available when needed.

The unit is supplied complete with an Instruction and Maintenance Manual available on our website [www.filtrec.com](http://www.filtrec.com) in the "Hydraulic Filter" section. The unit can be used by authorized operators who have read and understood all of its contents.
