

KH420 SERIES

High pressure filter kit

FILTREC KH420 series is specifically designed to be screwed directly on the control block.

Flow rate is up to 500 l/min with a wide range of bowls for a best tailored solution.

HOUSING	tested according to NFPA T3.10.5.1, ISO 10771, ISO 3968
PRESSURE:	Max operating: up to 420 bar Fatigue pressure test, over 10 ⁶ cycles from zero to max working pressure. Burst: over 1260 bar
MATERIALS:	Bowl: carbon steel Seal: NBR (FKM on request)

ELEMENT	tested according to ISO 11170, 2941, 2942, 2943, 3724, 3968, 16889, 16908, 23181
FILTER MEDIA:	Fibreglass: G01 - G03 - G06 - G10 G15 - G25
COLLAPSE PRESSURE:	21 bar With bypass 210 bar Without bypass
TEMPERATURE RANGE:	-30°C +100°C
FLUID COMPATIBILITY:	Full with HH-HL-HM-HV HETG-HEES (acc. to ISO 6743/4). For use with other fluid please contact Filtrac Customer Service (info@filtrac.it).

By pass valve, indicator and related measurements and tolerances for machining available on request.

HYDRAULIC SYMBOLS

ELEMENT PRESSURE DROP (filter elements 21 bar collapse)

The element Δp (bar) is given by the flow rate (l/min) multiplied by the factor in the table here below corresponding to the selected media and divided by 1000.

If the oil has a viscosity V_x different than 32 cSt a corrective factor $V_x/32$ must be applied.

Example: 80 l/min with D121G10A and oil viscosity 46 cSt $> (80 \times 4,42)/1000 \times (46/32) = 0,51$ bar

	G01A	G03A	G06A	G10A	G15A	G25A
D125	50,24	35,56	25,75	15,51	8,27	7,57
D120	30,43	21,30	13,97	8,39	5,18	4,78
D124	19,90	13,93	8,42	5,17	4,16	3,60
D121	15,48	10,84	6,79	4,42	3,38	2,93
D126	13,24	8,61	5,75	4,03	2,91	2,43

BOWL TIGHTENING TORQUE

screw up filter bowl till end

WARNING

- ⚠ Make sure that Personal Protective Equipment (PPE) is worn during installation and maintenance operation.

DISPOSAL OF FILTER ELEMENT

- ⚠ The used filter elements and the filter parts dirty of oil are classified as "Dangerous waste material": they must be disposed according to the local laws by authorized Companies.

INSTALLATION

- ⚠ 1. the filter bowl should be preferably mounted (3) downward
- 2. enough space must be available for filter element replacement
- 3. the visual clogging indicator must be in a easily viewable position
- 4. when a electrical indicator is used, make sure that it is properly wired
- 5. never run the system with no filter element fitted
- 6. keep in stock a spare FILTREC filter element for timely replacement when required
- 7. the hydraulic system should be earthed

OPERATION

- ⚠ 1. the filter must work within the operating conditions of pressure, temperature and compatibility given in the first page of this data sheet
- 2. the filter element must be replaced as soon as the clogging indicator signals at working temperature (in cold start conditions, oil temperature lower than 30°C, a false alarm can be given due to oil viscosity)
- 3. If no clogging indicator is mounted, replace the element according to the system manufacturer's recommendations

MAINTENANCE

- ⚠ 1. make sure that the system is switched off and there is no residual pressure in the filter / hydraulic system
- 2. unscrew the bowl (3) by turning it anti-clockwise and remove it
- 3. remove the dirty element (1)
- 4. fit a new FILTREC element (1), verifying the part number, particularly concerning the micron rating; open its plastic protection on the open end side and insert it onto the spigot in the filter head, then remove completely the plastic protection
- 5. clean carefully the bowl; check the O-rings (2) conditions and replace if necessary
- 6. lubricate the bowl's thread (3) and screw it by hand in your hydraulic system by turning it clockwise
- ⚠ 7. screw in the bowl to stop
- 8. the used filter elements cannot be cleaned and re-used
