

FA1 SERIES

In line spin-on type filters

Inline filters with spin-on cartridge, suitable for use on suction, return or low pressure line.

Available with or without bypass, indicator port is a standard option to fit a visual or electrical indicator.

HOUSING

tested according to NFPA T3.10.17, ISO12829, ISO3968

PRESSURE:

Max operating: 12 bar 20 bar Burst:

CONNECTIONS:

G 3/4"÷G 1 1/2"

MATERIALS:

Head: aluminium alloy Bowl: painted steel

Seal: NBR

BYPASS VALVE:

No by-pass (max work pressure 5 bar)

0,25 bar setting (SUCTION) 1,7 bar setting (RETURN/IN LINE)

ELEMENT

tested according to ISO 11170, 2941, 2942, 2943, 3724,

3968,16889, 16908, 23181

FILTER MEDIA:

Inorganic microfiber:

G03 - G06 - G10 - G25

Paper: C10 - C25 Wire mesh: T60 - T125

COLLAPSE

5 bar

PRESSURE:

TEMPERATURE

COMPATIBILITY:

from -30 °C to +100 °C

RANGE:

FLUID

Full with HH-HL-HM-HV HETG-HEES (acc. to ISO 6743/4).

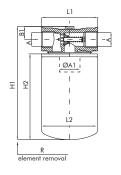

For use with other fluid please contact Filtrec Customer Service

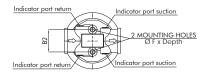

(info@filtrec.it).

HYDRAULIC SIMBOLS

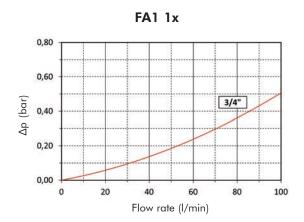

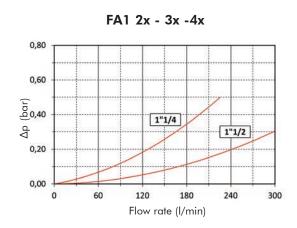

PRESSURE DROP (Ap) INFORMATION FOR FILTER SIZING

The total Delta P through a filter assembly is given from Housing Δp + Element Δp . This ideally should not exceed 0,2 bar for suction application and 0,5 bar for return (it should never exceed 1/3 of the set value of the by-pass valve). N.B. All the reported data have been obtained at our laboratory, according to specification ISO3968 with mineral oil having 32 cSt viscosity and density 0,875 Kg/dm³.

HOUSING PRESSURE DROP

The housing Δp is given by the curve of the considered model and port, in correspondence of the flow rate value.

ELEMENT PRESSURE DROP

The element Δp (bar) is given by the flow rate (I/min) multiplied by the factor in the table here below corresponding to the selected media and divided by 1000. If the oil has a viscosity Vx different than 32 cSt a corrective factor Vx/32 must be applied.

Example: 80 I/min with A120G10 and oil viscosity 46 cSt: $(80 \times 2,33)/1000 \times (46/32) = 0,27$ bar (with FA Example: 80 I/min with (*1) 2x A120G10 and oil viscosity 46 cSt: $(80 \times 1,17)/1000 \times (46/32) = 0,13$ bar

	C10	C25	G03	G06	G10	G25	T60	T125
A110	1,90	1,70	6,50	6,00	3,60	2,80	0,90	0,60
A111	1,60	0,90	4,30	4,00	3,40	1,60	0,50	0,25
A120	0,67	0,57	4,33	3,67	2,33	1,23	0,27	0,23
A121	0,60	0,47	3,67	2,67	2,00	1,00	0,23	0,20
A122	0,33	0,26	2,07	1,51	1,13	0,57	0,13	0,11
(*1) 2 x A120	0,34	0,29	2,17	1,84	1,17	0,62	0,14	0,12
(*2) 2 x A121	0,30	0,24	1,84	1,34	1,00	0,50	0,12	0,10
(*3) 2 x A122	0,16	0,13	1,03	0,75	0,56	0,28	0,06	0,05

(*1) values for FA130 & FA140 - (*2) values for FA131 & FA141 - (*3) values for FA132 & FA142 These sizes are fitting 2 cartridges each

EXAMPLE OF TOTAL Δp CALCULATION

FA120G10BB6RMPB with 80 I/min and oil 46 cSt:

Housing Δp 0,1 bar + element Dp 0,27 bar (80 x 2,33)/1000 x (46/32)= total assembly Δp 0,37 bar.

FA140G10BB6RMPB with 80 I/min and oil 46 cSt:

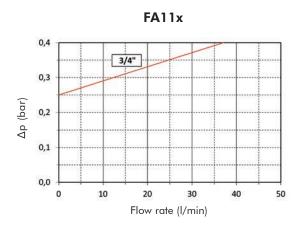

Housing Δp 0,03 bar + element Dp 0,13 bar (80 x 1,17)/1000 x (46/32)= total assembly Δp 0,16 bar.

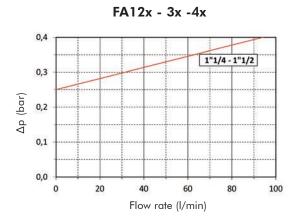

BYPASS VALVE PRESSURE DROP

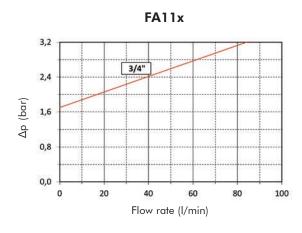

The bypass valve Δp is given by the curve of the considered model and setting, in correspondence of the flow rate value.

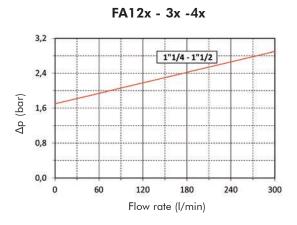

SUCTION BYPASS

RETURN/INLINE BYPASS

N.B. All the reported data have been obtained at our laboratory, according to specification ISO3968 with mineral oil having 32 cSt viscosity and density 0,875 Kg/dm³.

USER TIPS

- 1 FILTER HEAD
- 2 INDICATOR PORT
- 3 FIXING HOLES
- FILTER CARTRIDGE
- 5 IDENTIFICATION LABEL

INSTALLATION

- 1. the IN and OUT ports must be connected to the hoses in the correct flow direction (an arrow shows on the filter head (1)
 - the filter housing should be preferably mounted with the cartridge (5) downward
 - secure to the frame the filter head (1) using the threaded fixing holes (3)
 - verify that no tension is present on the filter after mounting
 - enough space must be available for filter element cartridge replacement
 - the visual clogging indicator must be in a easily viewable position
 - when a electrical indicator is used, make sure that it is properly wired

- never run the system with no filter element
- 9. keep in stock a spare FILTREC filter element for timely replacement when required

CARTRIDGE TIGHTENING TORQUE

All models	3/4 turn

INDICATOR TIGHTENING TORQUE

MPO-MPS-MPB-MPA-PDB PDS	10 Nm
Z20	50 Nm

OPERATION

- 1. the filter must work within the operating conditions of pressure, temperature and compatibility given in the first page of this data
- 2. the filter element must be replaced as soon as the clogging indicator signals at working temperature (in cold start conditions, oil temperature lower than 30°C, a false alarm can be given due to oil viscosity)
- If no clogging indicator is mounted, replace the element according to the system manufacturer's recommendations

WARNING

Make sure that Personal Protective Equipment (PPE) is worn during installation and maintenance operation.

DISPOSAL OF FILTER ELEMENT

The used filter elements and the filter parts dirty of oil are classified as "Dangerous waste material": they must be disposed according to the local laws by authorized Companies.

MAINTENANCE

- 1. make sure that the system is switched off and there is no residual pressure in the filter
 - unscrew the filter cartridge (5) by turning it anti-clockwise and remove it
 - fit a new FILTREC cartridge element (5), verifying the part number, particularly concerning the micron rating
 - ensure that the head mounting face is clean

- lubricate the gasket of the replacement cartridge and the thread prior to assembly
- spin on the new cartridge until it reaches the mounting face and tighten for 3/4 turn.
