

FA5 SERIES

In line medium pressure filters

Inline filters with spin-on cartridge for operating pressure up to 24 bar, flow rate up to 250 l/min.

The indicator ports allow to fit a visual electrical differential indicator and an absolute clock manometer or pressure switch.

tested according to NFPA T3.10.17, ISO12829, ISO3968

PRESSURE:

Max operating: 24 bar

Burst: 55 bar

G 1 1/4" CONNECTION:

MATERIALS:

Head: aluminium alloy

painted steel Bowl:

Seal: FKM

BYPASS VALVE: No by-pass

ELEMENT

tested according to ISO 11170, 2941, 2942, 2943, 3724,

3968,16889, 16908, 23181

FILTER MEDIA:

Inorganic microfiber:

G01 - G03 - G06 - G10 - G25

Inorganic microfiber + water absorbent:

GW40

COLLAPSE

PRESSURE:

12 bar

TEMPERATURE

RANGE:

from -25 $^{\circ}$ C to +120 $^{\circ}$ C

FLUID

COMPATIBILITY:

Full with HH-HL-HM-HV HETG-HEES (acc. to ISO 6743/4). Diesel EN590, ASTMD975 Biodiesel B0 to B100 EN14214 Fuel oil EN51603-1

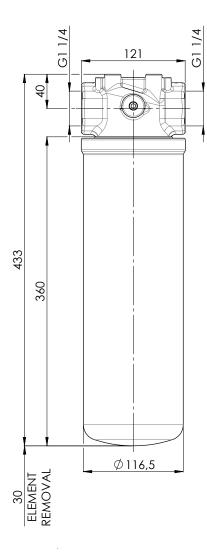

For use with other fluid please contact Filtrec Customer Service

(info@filtrec.it).

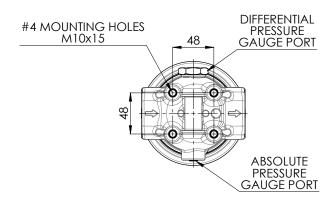

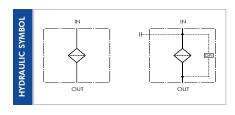

OVERALL DIMENSIONS

Weight: 3,9Kg

ACCESSORIES

13. OPTIONS

The accessories must be ordered separately

INDICATOR	MPO	pressure gauge rear connection, scale 0-16 bar		
For other options see clogging indicators	MPC	pressure gauge rear connection, setting 3 bar, scale 0-10 bar		
catalogue	MRC	pressure gauge radial connection, setting 3 bar, scale 0-10 bar		
	VEXF2	differential visual electric 2,7 bar		
	PF1	metal plug for indicator seat - FKM

PRESSURE DROP (Ap) INFORMATION FOR FILTER SIZING

The total Delta P through a filter assembly is given from Housing Δp + Element Δp ; this ideally should not exceed 1,0 bar. N.B. All the reported data have been obtained at our laboratory, according to specification ISO3968 with mineral oil having 32 cSt viscosity and density 0,875 Kg/dm³.

HOUSING PRESSURE DROP

The housing Δp is given by the curve of the considered model and port, in correspondence of the flow rate value.

ELEMENT PRESSURE DROP

The element Δp (bar) is given by the flow rate (l/min) multiplied by the factor in the table here below corresponding to the selected media and divided by 1000. If the oil has a viscosity Vx different than 32 cSt a corrective factor Vx/32 must be applied.

Example: 100 l/min with A522G01V0/AB2 and oil viscosity 46 cSt > 100 x 5,8/1000 x 46/32 = 0.83 bar

	G01	G03	G06	G10	G25	GW40
A522	5,8	3,29	1,08	0,83	0,65	0,98

EXAMPLE OF TOTAL Ap CALCULATION

FA522G01V0AB2B60Z000S0 with 100 l/min and oil 46 cSt

Housing Δp 0,14 bar + element Dp 0,83 bar (100 x 5,8/1000 x 46/32) = total assembly Δp 0,97 bar

WARNING

Make sure that Personal Protective Equipment (PPE) is worn during installation and maintenance operation.

DISPOSAL OF FILTER ELEMENT

The used filter elements and the filter parts dirty of oil or fuel are classified as "Dangerous waste material": they must be disposed according to the local laws by authorized Companies.

INSTALLATION

- 1. the IN and OUT ports must be connected to the hoses in the correct flow direction (an arrow shows on the filter head (1)
 - the filter housing should be preferably mounted with the cartridge (4) downward
 - secure to the frame the filter head (1) using the threaded fixing holes (3)
 - verify that no tension is present on the filter after mounting
 - enough space must be available for filter element cartridge replacement
 - the visual clogging indicator must be in a easily viewable position
 - when a electrical indicator is used, make sure that it is properly wired

- never run the system with no filter element
- 9. keep in stock a spare FILTREC filter element for timely replacement when required

OPERATION

- the filter must work within the operating conditions of pressure, temperature and compatibility given in the first page of this data
- 2. the filter element must be replaced as soon as the clogging indicator signals at working temperature (in cold start conditions, fluid temperature lower than 30°C, a false alarm can be given due to oil viscosity)
- If no clogging indicator is mounted, replace the element according to the system manufacturer's recommendations

MAINTENANCE

- 1. make sure that the system is switched off and there is no residual pressure in the filter
 - unscrew the filter cartridge (4) by turning it anti-clockwise and remove it. Check the condition of the gasket located at the end of the threated spigot; replace it if necessary
 - fit a new FILTREC cartridge element (4), verifying the part number, particularly concerning the micron rating
 - 4. ensure that the head mounting face is clean
- ↑ 5. lubricate the gasket of the replacement cartridge and the thread prior to assembly
 - spin on the new cartridge until it reaches the mounting face and tighten for 1/2 turn.
